\*\* Code requirements are as stated in the aforementioned handout, including that for at least 4 hours, the water level in the well can not be decreasing. Include any other information that is appropriate.

## **Pump Test Submittal Form**

for New Dwellings and Buildings Open to the Public

Complete one data sheet for the subject well being pumped, and an additional sheet for each additional well on the same property as the subject well.

This data sheet is for:							
☐ Pump Test Well or		☐ Monitoring Well #		Date Performed:*			
Time (30 minute intervals)	Elapsed Time (hours)	Water level before and during pumping	Rate of sustained yield (gpm)* pumped well only	Recovery water level for 4 hours after pumping has stopped or until water level returns to 90% of pre-pumping static water level, whichever comes first. (Complete Recovery Worksheet and review its example.) Required for only the subject well and the closest well on the same property and drawing from the same aquifer.			
Before pumping	0		N/A				

<sup>\*</sup> Note the impact of the date, as detailed in the handout "Water Supply Requirements for Building Permits ~ New Dwellings and Places Open to the Public" (revised 2017).

<sup>\*\*</sup> Sustained yield (rate of pumping that does not reduce the water level within the well) must be maintained for at least **4 hours** for a Pump Test for a new dwelling or a place of public occupancy.
